Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3-11 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Perrine (US Patent 5,716,432) in view of Cullen et al (US Patent 4,772,300).

Perrine discloses a method of fabricating a desiccant container 10. This method involves providing cup 14 and cap 16 made of a high-density material such as polypropylene. A membrane comprising plies 74 and 76 is ultrasonically welded to the cup and cap (see col. 4, line 44 through col. 5, line 26). Cup 14 includes annular shaped portions 86, 88, 90 and 92 which function as energy directors in the manner claimed by the applicant.

However, Perrine does not disclose the low-density membrane of spun bonded plastics. Regarding this difference, the applicant is directed to the reference of Cullen et al.

Cullen discloses an absorbent cartridge. This cartridge employs a low density spun bonded polyolefin membrane (see col. 4, lines 29-43). It would have been obvious to one having ordinary skill in the art to employ a low density membrane of spun bonded

plastics, as taught by Cullen, in the method of Perrine as a matter of design choice based on desired physical properties of the materials.
